Work Experience

Team Member   September 2019 – Till now
Taco bell, Oshawa, Ontario   (16 Months)

Projects

Restaurant Application
- An Application developed for a company which owns three restaurants. All three restaurants were included in a single application which let the user open a particular restaurant, all this was part of the user experience.
- The technologies used for the development were Html, Java Script, CSS, and jQuery.
- The design was also part of the project, designed in the adobe environment with Photoshop and Illustrator.

Mad Movies Website
- Mad movies is a website which had the database of information related to films, television programs, and streaming content.
- The SQL database was provided by the college and my job was to use that database to make a website which features information about movies and some cast members.
- I use PHP services to pull the data, and some ajax calls in the JavaScript, the interface and the user experience was developed using JavaScript, CSS, jQuery, and Foundation CSS Library.

Equipment Checkout Site
- Equipment checkout site is a site use for checking out equipment from the Durham college equipment facility.
- The Database was provided by the college for login in, equipment available, Equipment check out, and User information.
- I developed the UX/UI for the front end of the website using VUE.js Framework and Materialize CSS.
- I created the user experience for the user's login in, available equipment, updating information, and checking out using PHP services and some axiox calls to the database.
